## Tutorial 4

## Markov Networks (1.)

Solutions should be given till 19th November 2007, 16:00

## Exercise 1 Topological order (5 points + 10 bonus points)

a) [3 pts.] Does the graph in Figure 1 have a topological order? If yes, is this unique? (Does it have only one topological order or more?)
b) [2 pts.] Show an example for a graph, which has several topological orders!
c) [optional, 10 bonus pts.] Is it possible to choose directions for the edges of the Petersen graph (Fig. 2.) so that it has a unique topological order?

## Exercise 2 Graphical representation of independence (15 Points)

d) [4 pts.] Is the graph in Fig. 3 a representation of the following independence model? $\mathrm{I}=\{\mathrm{I}(\mathrm{A}, \mathrm{C} \mid\{\mathrm{E}, \mathrm{F}, \mathrm{B}\}), \mathrm{I}(\mathrm{C}, \mathrm{A} \mid\{\mathrm{E}, \mathrm{F}, \mathrm{B}\}), \mathrm{I}(\mathrm{A}, \mathrm{C} \mid\{\mathrm{D}, \mathrm{F}, \mathrm{B}\}), \mathrm{I}(\mathrm{C}, \mathrm{A} \mid\{\mathrm{D}, \mathrm{F}, \mathrm{B}\}), \mathrm{I}(\mathrm{A}, \mathrm{D} \mid\{\mathrm{E}, \mathrm{F}, \mathrm{B}\})$, I(D,A|\{E,F,B $\}), \mathrm{I}(\mathrm{A}, \mathrm{D} \mid\{\mathrm{E}, \mathrm{F}, \mathrm{C}\}), \mathrm{I}(\mathrm{D}, \mathrm{A} \mid\{\mathrm{E}, \mathrm{F}, \mathrm{C}\})\}$
e) [3 pts.] Is the graph in Fig. 3 a faithful representation of the indep. relation above?
f) [3 pts.] Construct (another) graph, which represents the independence relation above! (This graph should not necessary be a faithful representation.)
g) [5 pts.] For which independence relation is the graph in Fig. 3 a faithful representation?

## Exercise 3 Properties of independency models, graphical representation (10 Points)

Suppose we are given the following independence model:
$\mathrm{I}(\mathrm{A}, \mathrm{B} \mid\{\mathrm{C}, \mathrm{D}\}), \mathrm{I}(\mathrm{B}, \mathrm{A} \mid\{\mathrm{C}, \mathrm{D}\}), \mathrm{I}(\mathrm{A}, \mathrm{C} \mid\{\mathrm{D}, \mathrm{E}\})$
a) [3 pts.] Which of the properties (symmetric, decomposable and intersectable) hold for this model?
b) [2 pts.] Modify the model so that all of the properties above hold for the model!
c) [5 pts.] Construct the minimal undirected graph representation of the model. Is it trivial? Is it unique? Is it faithful?

Exercise 4 Potentials, Markov Networks (15 Points)
Given that the potentials $\psi_{1}, \psi_{2}$ represented in Table 1 and Table 2 factorize the JPD $p$, solve the following tasks:
a) [4 pts.] Multiply $\psi_{1}$ and $\psi_{2}$ and depict the graph associated with these potentials.
b) [2 pts.] Reconstruct $p$.
c) [3 pts.] Does this graph represent the independency model of $p$ ? Justify your answer.
d) [3 pts.] Are B and C conditionally independent given D in $p$ ?
e) [3 pts.] Does this graph represent the independency model of $p$ faithfully?

Fig. 1

Fig. 2 (Petersen Graph)

Fig.3.

| A | B | $\mathrm{P}(\mathrm{A}, \mathrm{B})$ |
| :--- | :--- | :--- |
| 0 | 0 | 0.2 |
| 0 | 1 | 0.2 |
| 1 | 0 | 0.3 |
| 1 | 1 | 0.3 |

Table 1.

| B | C | D | P(A,B,C) |
| :--- | :--- | :--- | :--- |
| 0 | 0 | 0 | 0.225 |
| 0 | 0 | 1 | $0.0666 \ldots$ |
| 0 | 1 | 0 | 0.075 |
| 0 | 1 | 1 | $0.0333 \ldots$ |
| 1 | 0 | 0 | 0.075 |
| 1 | 0 | 1 | $0.3333 \ldots$ |
| 1 | 1 | 0 | 0.025 |
| 1 | 1 | 1 | $0.1666 \ldots$ |

Table 2.
