

Image Analysis

Software Libraries for Image Analysis (Introduction to Open CV & ImageJ)

K. Buza, Lars Schmidt-Thieme

Information Systems and Machine Learning Lab (ISMLL)
Institute of Economics and Information Systems
& Institute of Computer Science
University of Hildesheim
<http://www.ismll.uni-hildesheim.de>

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Software Libraries for Image Analysis

Motivation

ImageJ

OpenCV

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Why to use software libraries?

- Low-level image processing functionality (openCV, imageJ)
 - Read and write image files, Show Image, Conversion between color spaces, histograms, image derivatives (extended Sobel operator), Laplacian of the image, blurring ...
- Image analysis (openCV)
 - Image segmentation, Object identification (based on visual image of an object), Face Recognition, Gesture Recognition, Motion recognition, Stereo vision, Edge/line detection ...
- Statistical machine learning library (openCV, Weka)
 - Naive Bayes classifier, k-nearest neighbor algorithm, Support Vector Machine, Decision Trees, Boosting, Random forest, Expectation Maximization, Neural Networks

Software Libraries for Image Analysis

Motivation

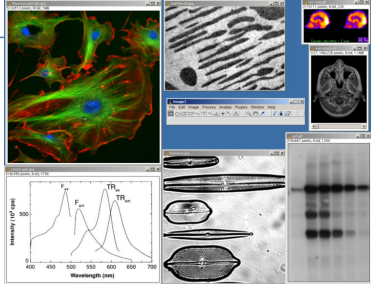

ImageJ

OpenCV

Image Analysis

Image J

- Image Processing Program (Library) in Java
- Developed at National Institute of Health
- “User-written plugins make it possible to solve many image processing and analysis problems, from 3-dimensional live-cell imaging, to radiological image processing, multiple imaging system data comparisons to automated hematology systems.”
(<http://en.wikipedia.org/wiki/ImageJ>)
- Source code for ImageJ is freely available
- TIFF, PNG, GIF, JPEG, BMP, DICOM, FITS
- <http://rsb.info.nih.gov/ij/> (API here!)

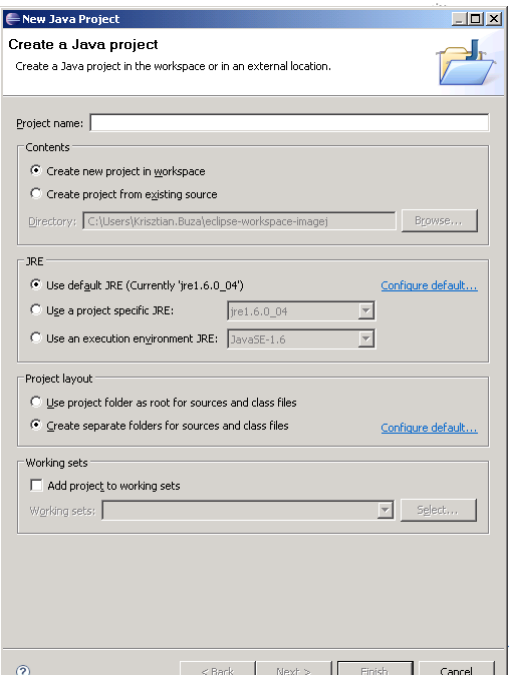

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

First steps

- Download and install imageJ
- Eclipse
- File/New/Java Project
- Give a name
- Click NEXT

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

First steps

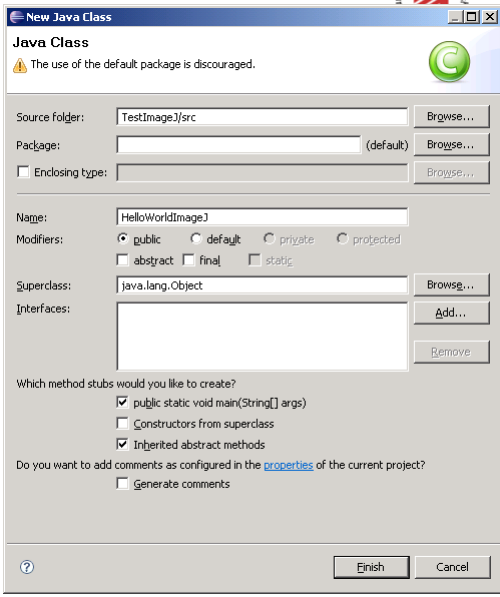

- Libraries
- Add External JARs
- C:\Program Files\ImageJ\ij.jar

K. Buza, Lars Schmidt-Thieme, Information Systems and
Course on Image Analysis, winter term 2008/09

Image Analysis

First Steps

- Right-click on „src“
- New/Class
- Select public static void main(...)
- Finish

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

Hello World

```
import ij.io.*;
import ij.*;

public class HelloWorldImageJ {
    public static void main(String[] args) {
        Opener opener = new Opener();
        ImagePlus img = opener.openImage(
            "C:\\Users\\Krisztian.Buza\\ImageProcessing\\"+
            "VOC2008-data\\data\\VOCtrainval_14-Jul-2008\\"+
            "VOCdevkit\\VOC2008\\JPEGImages\\2008_000711.jpg");
        img.show();
    }
}
```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

Hello World

```

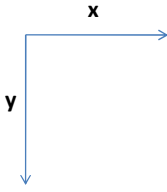

import ij.io.*;
import ij.*;
import ij.process.*;

public class HelloWorldImageJ {
    public static void main(String[] args) {
        Opener opener = new Opener();
        ImagePlus img = opener.openImage("...");
        img.show();

        ImageProcessor img_p = img.getProcessor();

        int[] histogram = new int[256];
        for (int x=0;x<img_p.getWidth();x++) {
            for (int y=0;y<img_p.getHeight();y++) {
                int[] one_pixel = img_p.getPixel(x, y, null);
                int r = one_pixel[0];
                int g = one_pixel[1];
                int b = one_pixel[2];
                int intensity = (r+g+b)/3;
                histogram[intensity]++;
            }
        }
    }
}

```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

Hello World

```

import ij.io.*;
import ij.*;
import ij.process.*;
import ij.gui.*;
import java.awt.*;

public class HelloWorldImageJ {
    public static void main(String[] args) {
        (...)
        ImagePlus histogram_image = NewImage.createRGBImage (
            "Histogram of the Image", histogram.length, 200, 1, NewImage.FILL_WHITE);
        ImageProcessor histogram_image_p = histogram_image.getProcessor();

        int hist_max = 0;
        for (int i=0;i<histogram.length;i++)
            if (histogram[i]>hist_max) hist_max = histogram[i];

        for (int i=0;i<histogram.length;i++) {
            histogram_image_p.setColor(new Color(128,128,128));
            int column_length = (200*histogram[i]/hist_max);
            histogram_image_p.drawRect(i,200-column_length,1,column_length);
        }
        histogram_image.show();
    }
}

```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

The screenshot shows a Java IDE window titled "Image Analysis" with a code editor on the left and a "Histogram of the Image" window on the right. The code editor contains the following code:

```

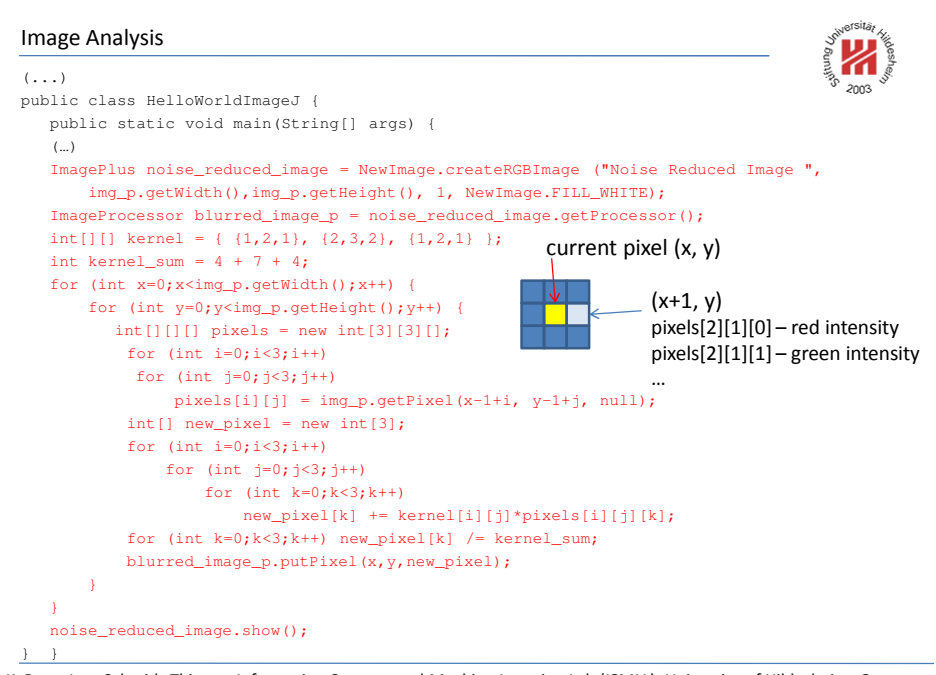

import java.awt.*;
import java.awt.image.*;
import javax.swing.*;
import java.io.*;

public class HelloWorldImageJ {
    public static void main(String[] args) {
        Image img_p = new Image("2008_000711.jpg", 500, 334);
        BImage (
        Histogram of the Image
        256x200 pixels; RGB; 200K
    
```

The histogram window displays a distribution of pixel intensities for the image "2008_000711.jpg". The histogram shows two main peaks, one on the left and one on the right, indicating a range of pixel intensities. The window title is "Histogram of the Image" and it specifies "256x200 pixels; RGB; 200K".

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
 Course on Image Analysis, winter term 2008/09

Image Analysis

The screenshot shows a Java IDE window titled "Image Analysis" with a code editor on the left and a diagram of a 3x3 kernel on the right. The code editor contains the following code:

```

(...)
public class HelloWorldImageJ {
    public static void main(String[] args) {
        (...)
        ImagePlus noise_reduced_image = NewImage.createRGBImage ("Noise Reduced Image ",
            img_p.getWidth(),img_p.getHeight(), 1, NewImage.FILL_WHITE);
        ImageProcessor blurred_image_p = noise_reduced_image.getProcessor();
        int[][] kernel = { {1,2,1}, {2,3,2}, {1,2,1} };
        int kernel_sum = 4 + 7 + 4;
        for (int x=0;x<img_p.getWidth();x++) {
            for (int y=0;y<img_p.getHeight();y++) {
                int[][] pixels = new int[3][3];
                for (int i=0;i<3;i++)
                    for (int j=0;j<3;j++)
                        pixels[i][j] = img_p.getPixel(x-1+i, y-1+j, null);
                int[] new_pixel = new int[3];
                for (int i=0;i<3;i++)
                    for (int j=0;j<3;j++)
                        for (int k=0;k<3;k++)
                            new_pixel[k] += kernel[i][j]*pixels[i][j][k];
                for (int k=0;k<3;k++) new_pixel[k] /= kernel_sum;
                blurred_image_p.putPixel(x,y,new_pixel);
            }
        }
        noise_reduced_image.show();
    }
}
    
```

The diagram on the right shows a 3x3 grid of pixels. The center pixel is highlighted in yellow and labeled "current pixel (x, y)". The pixel to its right is labeled "(x+1, y)". Below the diagram, the text reads:

```

pixels[2][1][0] – red intensity
pixels[2][1][1] – green intensity
...
    
```

What is Open CV ?

- Computer vision library
- Developed by Intel
- Free for commercial and research use
 - BSD-like licence, open source
- Cross-platform
 - Windows, Linux, Mac OS, embedded operating systems
- Focuses on real-time image processing
- C functions and C++ classes
- Interfaces to several softwares (like Octave)
- More than 500 algorithms

http://pascal.in.ecs.soton.ac.uk/challenges/VOC/voc2008/examples/boat_07.jpg

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Getting Started

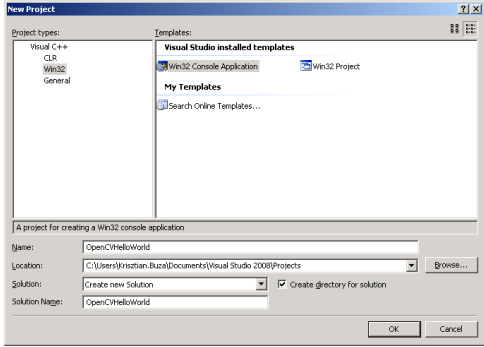

- C, C++ Compiler:
 - Microsoft Visual C++ 2008 Express
 - microsoft.com/express
- Open CV 1.0 (!)
 - install executable
 - (we had some strange bug with version 1.1)

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Course on Image Analysis, winter term 2008/09

Run

- Debug / Start Without Debugging

- Use `cvNamedWindow(... , 1)` to display the image in the original size

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Some more examples

- Write a „Hello World“ on the screen
- Transformation between color spaces
- Histogram
- Resize image

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

```
void print_helloWorld() {
    int height = 320; int width = 240; //declare for the height and width of the image
    CvPoint pt = cvPoint( height/4, width/2 ); //specify the point to place the text
    IplImage* hw = cvCreateImage(cvSize(height, width), 8, 3); //8 bit, 3 channel

    CvFont font;
    cvInitFont( &font, CV_FONT_HERSHEY_COMPLEX, 1.0, 1.0, 0, 1, CV_AA);
    cvPutText(hw, "Hello World", pt, &font, CV_RGB(150, 0, 0) ); // text => image

    cvNamedWindow("Hello World", 0); //create the window
    cvShowImage("Hello World", hw);
    //display the image in the window
    cvWaitKey(0);

    cvReleaseImage( &hw );
    cvDestroyWindow("Hello World");
    //UNLIKE JAVA MEMORY IS NOT
    //REUSED AUTOMATICALLY IN C++ !
}
```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

```

void color2black_and_white() {
    char* imageName = "C:\\Users\\Krisztian.Buza\\collection1\\forest4.jpg";
    IplImage* im = cvLoadImage(imageName, -1);
    if( im == 0 ) { return ; }
    cvNamedWindow("Original", 0); cvShowImage("Original", im );

    IplImage* grayImage = cvCreateImage(cvSize(im->width,im->height),
        IPL_DEPTH_8U, 1);    // 1-channel image of the same size as the original
    cvCvtColor(im, grayImage, CV_BGR2GRAY);
        //convert the original image to gray (use BGR here, not RGB!)
        // conversion to HSV is also possible with cvCvtColor
    cvNamedWindow("BW", 0);
    cvShowImage("BW", grayImage );
    cvWaitKey(0);
    cvReleaseImage( &grayImage );
    cvReleaseImage( &im );
}

```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

```

void black_and_white_histogram() {
    char* imageName = "C:\\Users\\Krisztian.Buza\\collection1\\forest4.jpg";
    IplImage* im = cvLoadImage(imageName, -1);
    if( im == 0 ) { return ; }
    IplImage* grayImage = cvCreateImage(cvSize(im->width,im->height), IPL_DEPTH_8U, 1);
    cvCvtColor(im, grayImage, CV_BGR2GRAY);
    CvRect rect = cvRect(0, 0, 500, 600 ); //create a rectangular area to evaluate
    cvSetImageROI(grayImage, rect); // establish a region of interest with the rect. Area
    IplImage* histImage = cvCreateImage(cvSize(320,200), 8, 1); // image for histogram

    int hist_size = 100;
    CvHistogram* hist = cvCreateHist(1, &hist_size, CV_HIST_ARRAY);
    cvCalcHist( &grayImage, hist, 0, NULL ); //calculate histogram

    (... ) // draw histogram image and display it
}

```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Image Analysis

```

void black_and_white_histogram() { // draw histogram image and display it
    (...)
    float min_value, max_value; int min_idx, max_idx;
    cvGetMinMaxHistValue( hist, &min_value, &max_value, &min_idx, &max_idx);
    cvScale( hist->bins, hist->bins, ((double)histImage->height)/max_value, 0 );
        //scale the bin values so that they will fit in the image representation
    cvSet( histImage, cvScalarAll(255), 0 );
    int bin_w = cvRound((double)histImage->width/hist_size);
    int i; float mean=0, variance=0;
    for( i = 0; i < hist_size; i++ ) {
        cvRectangle( histImage, cvPoint(i*bin_w, histImage->height),
            cvPoint((i+1)*bin_w, histImage->height - cvRound(cvGetReal1D(hist->bins,i))),
            cvScalarAll(0), -1, 8, 0 );
        float* bins = cvGetHistValue_1D(hist,i); // You can get histogram values this way,
        float one_histogram_value = bins[0]; // if you need it for calculations
    }
    (...) // Display histogram image
}

```

Image Analysis

Access to image pixels

```

IplImage* im = cvLoadImage(imageName, -1);

for (int i=0 ; i < im->height ; i++) {
  for (int j=0 ; j < im->width ; j++) {
    uchar* chanel_values =
      &CV_IMAGE_ELEM(im, uchar, i, j*3);
    // 3-channel, color image
    // i = horizontal position
    // j = vertical position
    // chanel_values[0], chanel_values[1], ...
    // you can read and write (change) pixel values
  }
}

```

Course on Image Analysis, winter term 2008/09

Image Analysis

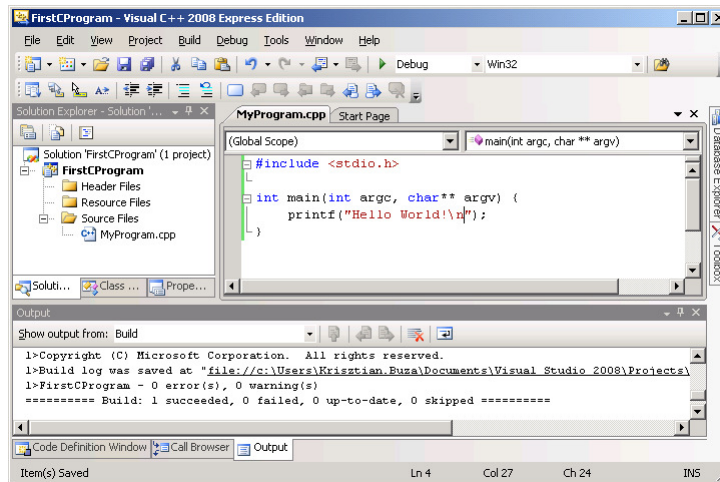

C/C++ in a nutshell

- Java-like syntax
 - int, char, { , } , if, while ... like in Java
 - Functions ≈ Methods
 - Pointers ≈ References
- Some important differences compared to Java
 - Not fully object-oriented
 - Pointers
 - Arrays and Pointers
 - Memory allocation
 - Character arrays often used as strings (although there is a String class in C++)
 - Logic expressions
 - ...

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

C/C++ is not fully object-oriented

```

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

C/C++ is not fully object-oriented

- One does not need to use classes
 - But one **CAN** use classes (C++), if it fits the task better
- One can write programs with functions
- Functions have a return type (like in java)
- If one does not use classes, no function access control (like public, private, protected)
- Function *main* similar to the *main* method in Java

K. Buza, Lars Schmidt-Thieme, Information Systems and Machine Learning Lab (ISMLL), University of Hildesheim, Germany
Course on Image Analysis, winter term 2008/09

Pointers

- In Java

- char, int, byte ... → value is stored (char ≠ Char )
- Objects: **new** creates an object instance, variables are references to objects (when calling a method on an object you do not need to know that the variable is a reference)

- In C/C++

-  – Variables can store both values and pointers (be careful and make sure if you store the pointer or the value)
-  – Pointer for an int → memory address where it is stored (one usually does not want to use this in calculations)

Value vs. Reference – Example (Java)

```
int i = 1;
int j = i;
j++;
DreieckMitRechteck d = new DreieckMitRechteck(1.0d, 2.0d);
DreieckMitRechteck d2 = d;
d2.changeA(2.0);
```

```

class DreieckMitRechteck {
    private double a,b,c;
    public DreieckMitRechteck(double a0, double b0) {
        a = a0; b = b0; c = Math.sqrt(a*a+b*b);
    }
    public double getA() {return a;}
    public double getB() {return b;}
    public double getC() {return c;}
    public void changeA(double a0) {
        a = a0; c = Math.sqrt(a*a+b*b);
    }
}

public class Test {
    public static void main(String[] args) {
        int i = 1; int j = i; j++;
        System.out.println("i="+i+"\n"+"j="+j);
        DreieckMitRechteck d = new DreieckMitRechteck(1.0d, 2.0d);
        System.out.println("d.getC()/1 "+d.getC());
        DreieckMitRechteck d2 = d;
        d2.changeA(2.0);
        System.out.println("d.getC()/2 "+d.getC());
        System.out.println("d2.getC() "+d.getC());
    }
}

i=1
j=2
d.getC()/1  2.23606797749979
d.getC()/2  2.8284271247461903
d2.getC()   2.8284271247461903

```

Image Analysis

Value vs. Pointer – Example (C/C++)

```

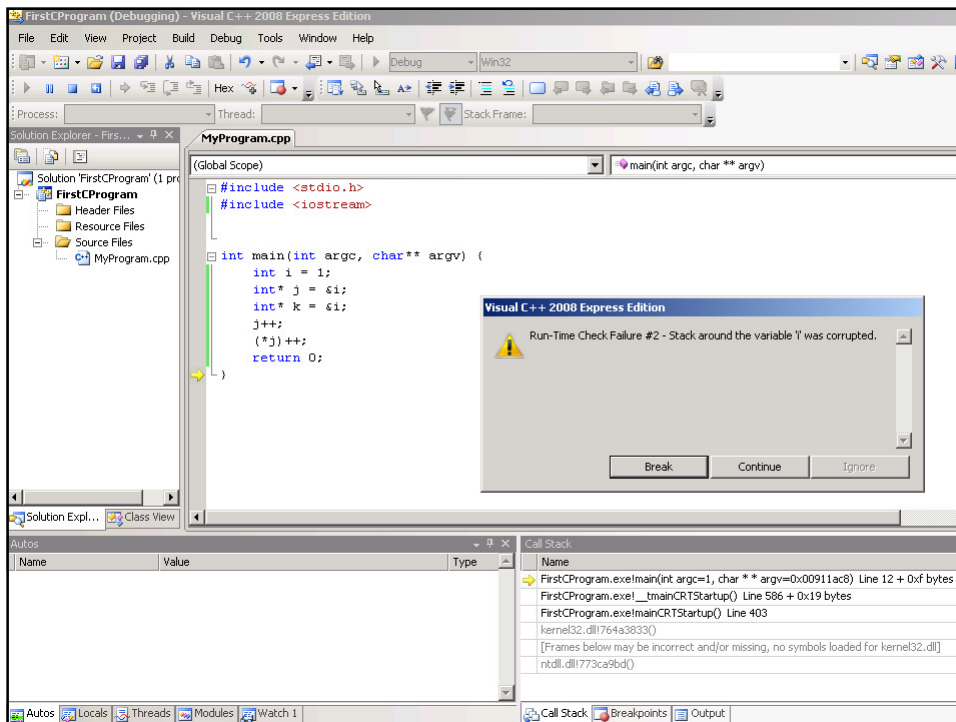

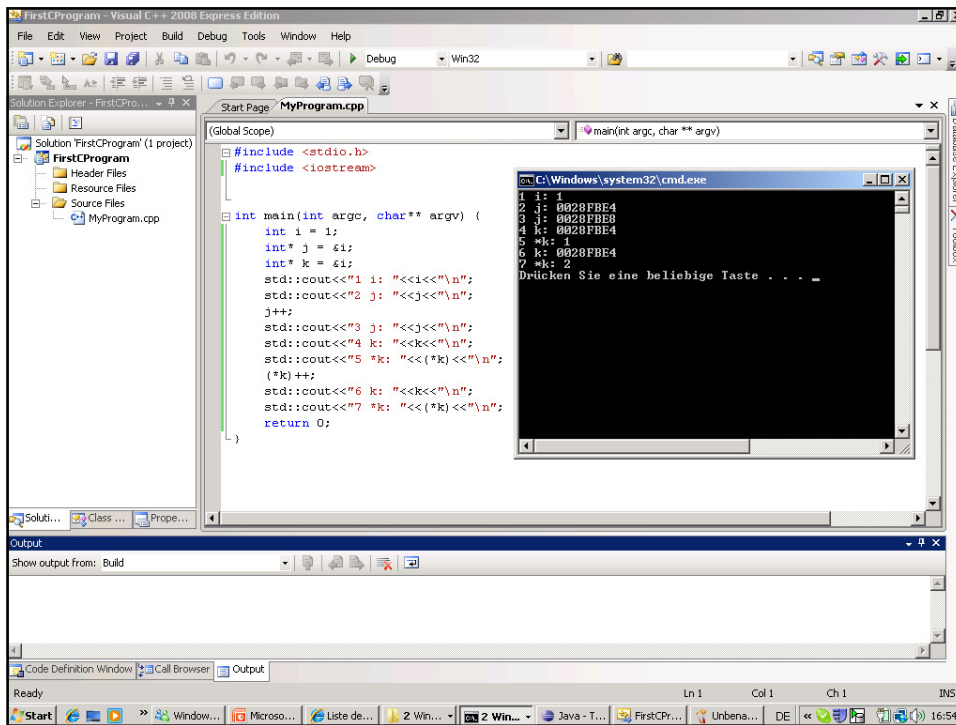

int i = 1;           // the value of i is set to 1
int* j = &i;        // use * to define pointers
int* k = &i;        // j,k are pointers, they include the memory address of i
                    // &i means: the memory address of i

j++;                // the memory address is changed, as you do not what is at
                    // the new address, please be very careful
                    // do not change the content at the new address
                    // if you want to avoid strange bugs!!!

(*k)++;            // * turns the pointer into value (you can access the value
                    // stored at the given address)
                    // the value of i has been changed!
                    // (k is just a pointer to i)

```

Arrays and pointers

- Pointer arithmetic
- Memory allocation (calloc)

```
int* my_array = (int *) calloc(20, sizeof(int));
my_array[0] = 23;
my_array[1] = 12;
my_array[3] = 45;
```

```
int* my_array = (int *) calloc(20, sizeof(int));
*(my_array) = 23;
*(my_array+1) = 12;
*(my_array+2) = 45;
```

Strings vs. char arrays

Often char arrays are used instead of strings

```
char path[] = "C:\\Users\\Krisztian.Buza\\";
char* file = "2007_006240.jpg";
char* imageName =
    (char *) calloc(strlen(path) + strlen(file) + 1, sizeof(char));
strcat(imageName, path);
strcat(imageName, file);
std::cout<<imageName<<"\n";
std::cout<<path<<"\n";
```

Logic expressions

- Java-like expressions allowed
if (i==0) { ...}
- integer = logic expression in C/C++
0 → false, everything else → true

```
int i = 0; int j = 1; int k = -1;
if (i) std::cout << "i ";
if (j) std::cout << "j ";
if (k) std::cout << "k ";
```

Actually, logic expressions are evaluated as integers in C/C++

System.out.println(i==5);	→	true or false
std::cout << (i==5);	→	1 or 0
